

HOUSES/HOMES OF 2030

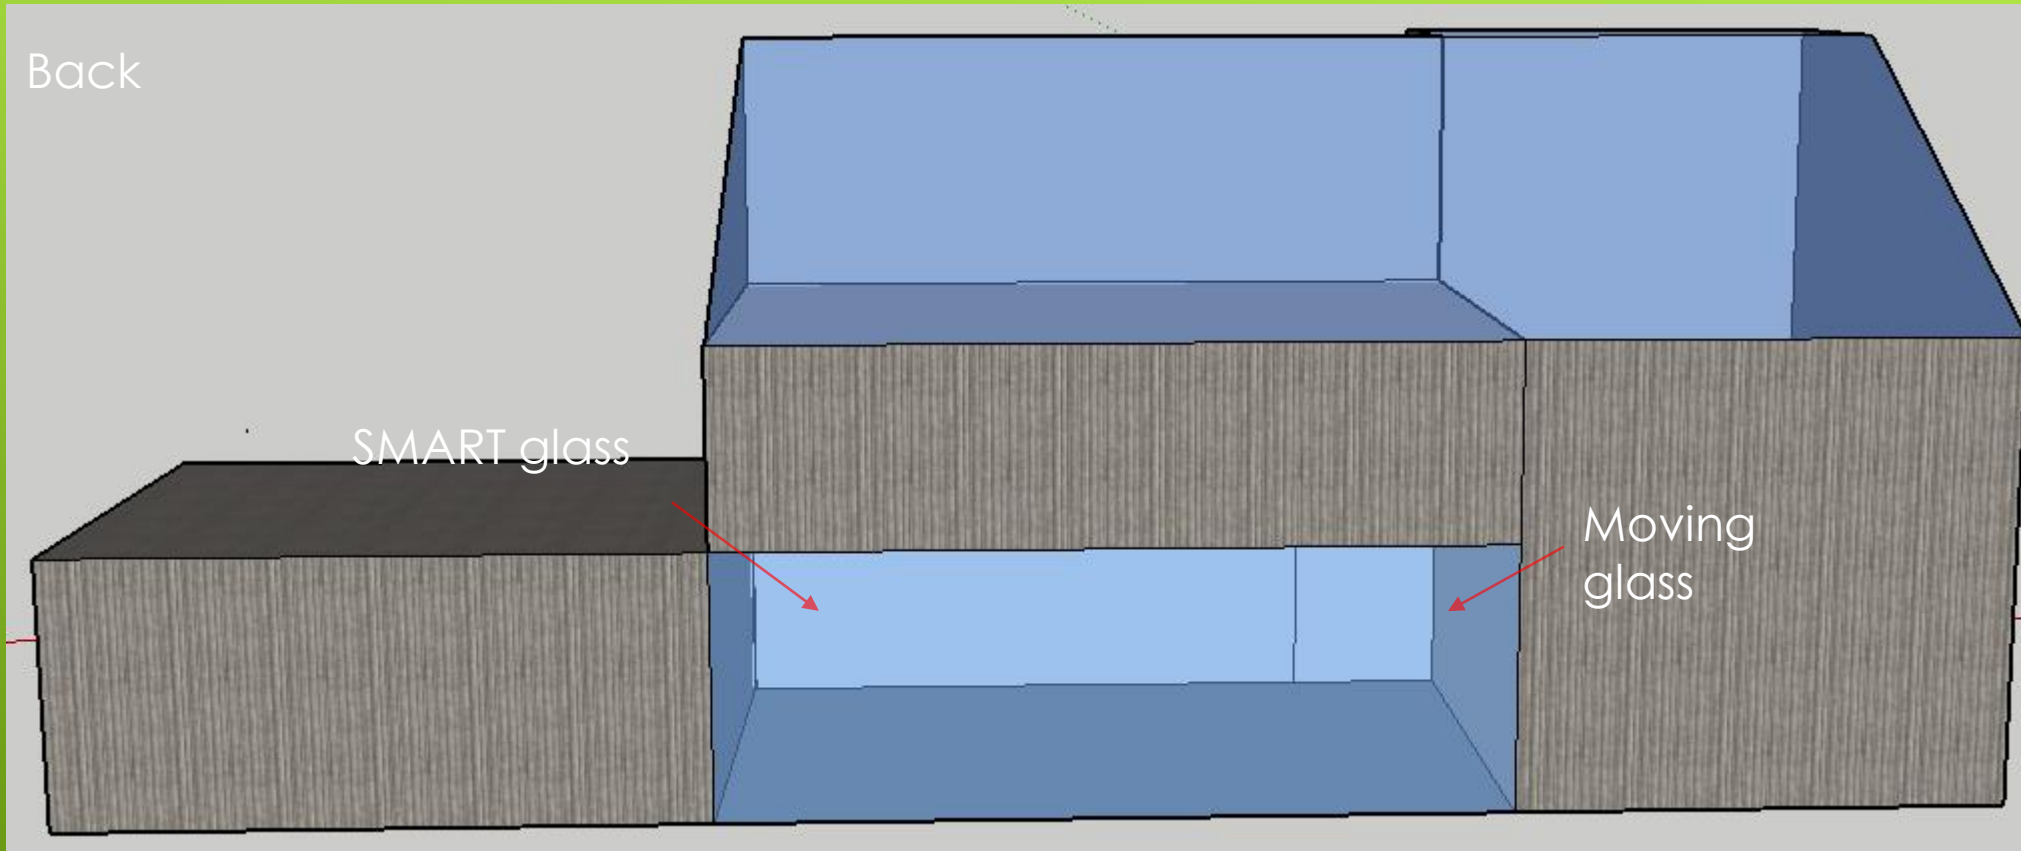

The SMART house/homes of the future.

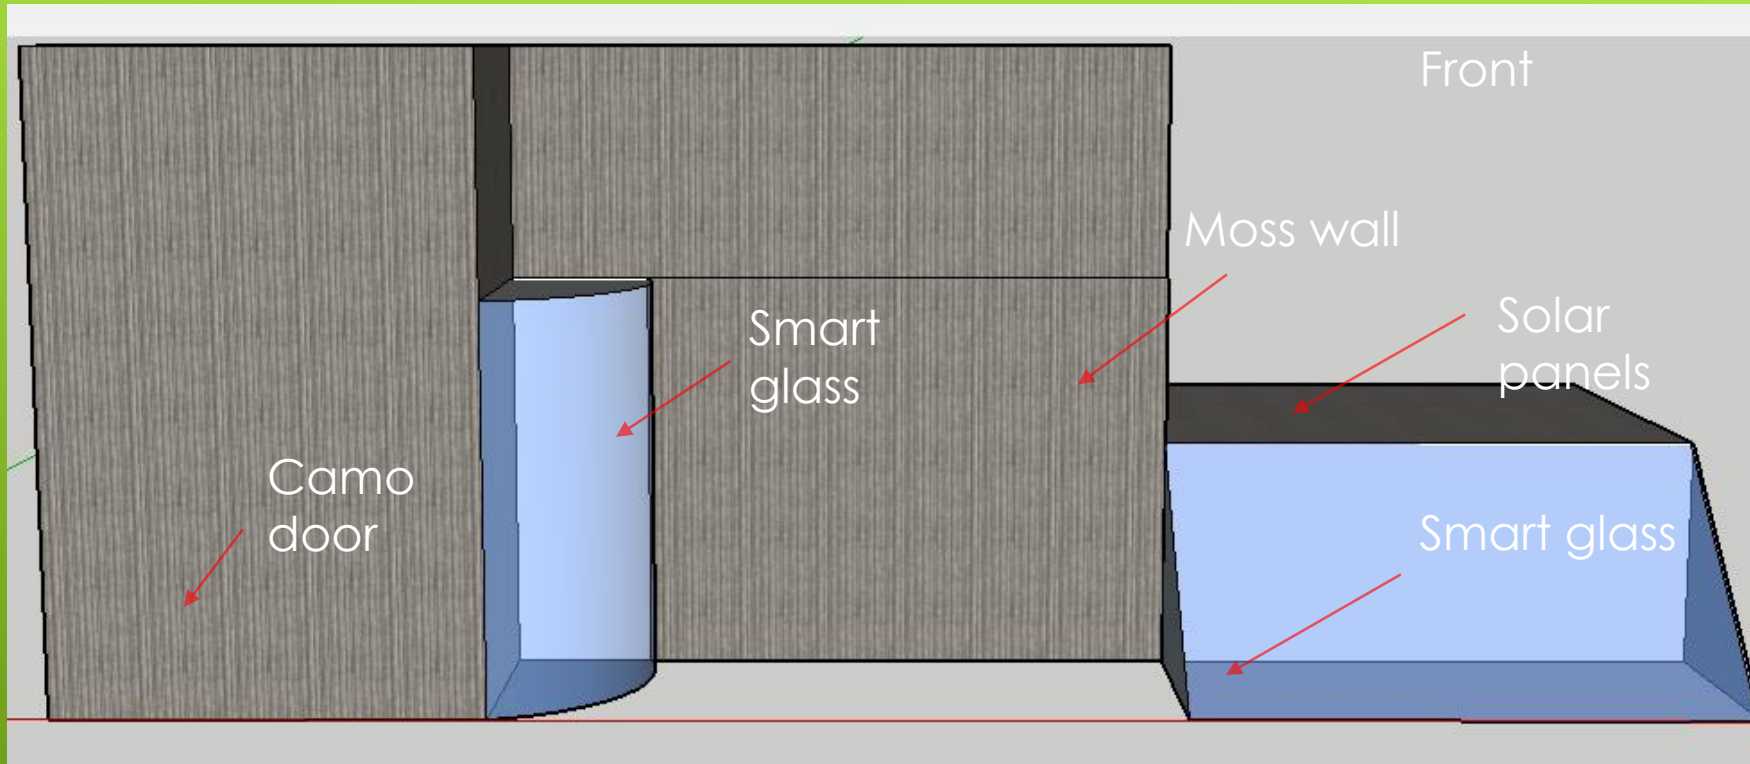

THE SMART HOUSE

The SMART house of the future.

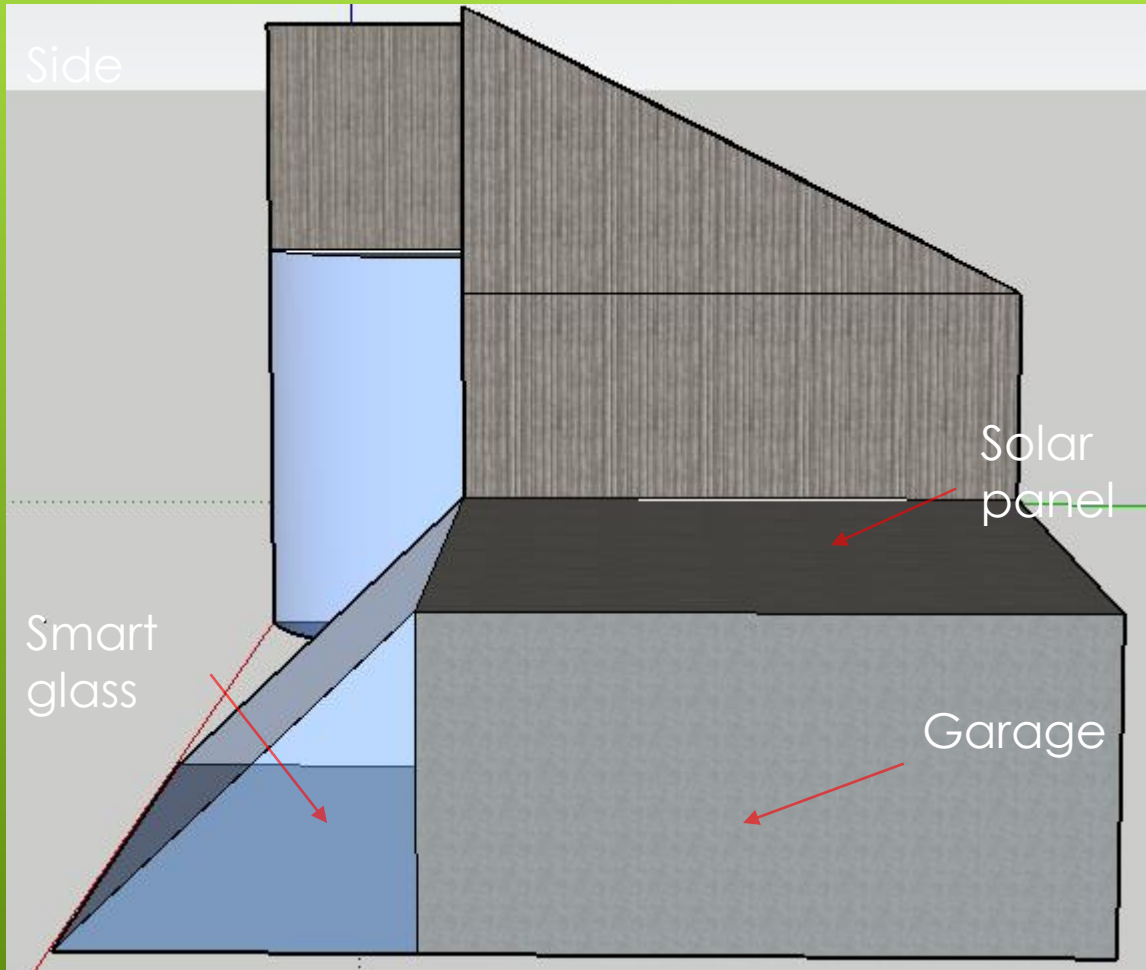

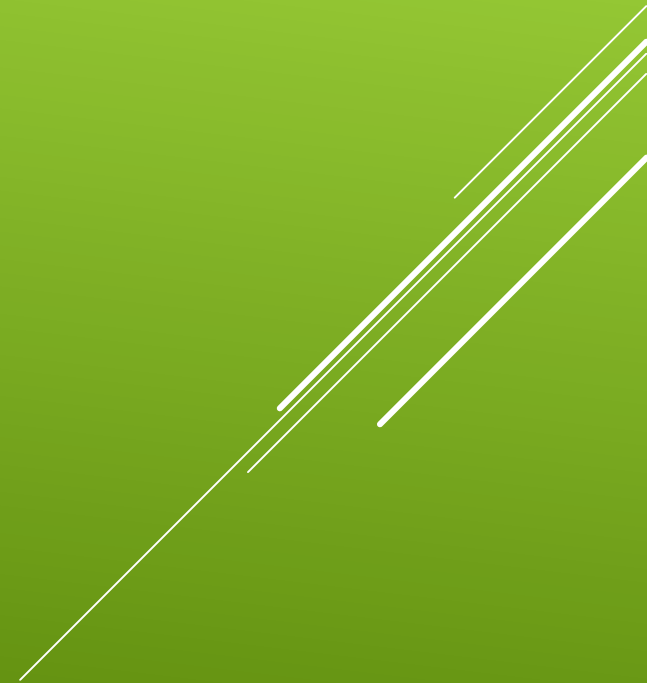

On the back of the SMART house you are able to open up to an outdoor living area. the door moves mechanical to the left hand side, making it nice and easy to move in and out.

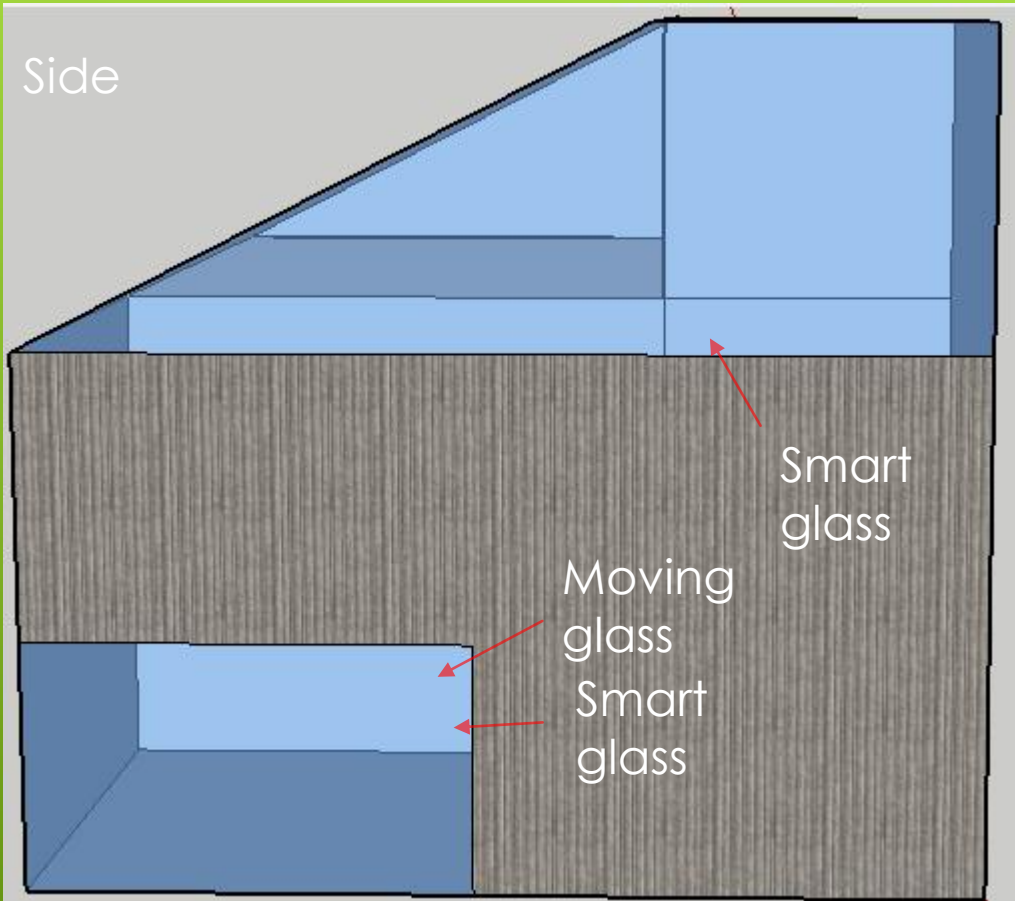

Our house is going to be a SMART (meaning it runs off a voice controlled artificial intelligence, helping the owner of the house, as the house is a SMART house it has built in SMART locks meaning you can control the locks from your phone). The house is also going to be completely energy efficient, in order to do this the SMART house will have solar panels on the roofs to create its own energy's. The house will have moss, this helps to improve the air quality around the house. The house will have special glass which is used as a heater and it can fog up (acting as a curtain). The SMART house will have a smart flower solar panel inserted into the garden.

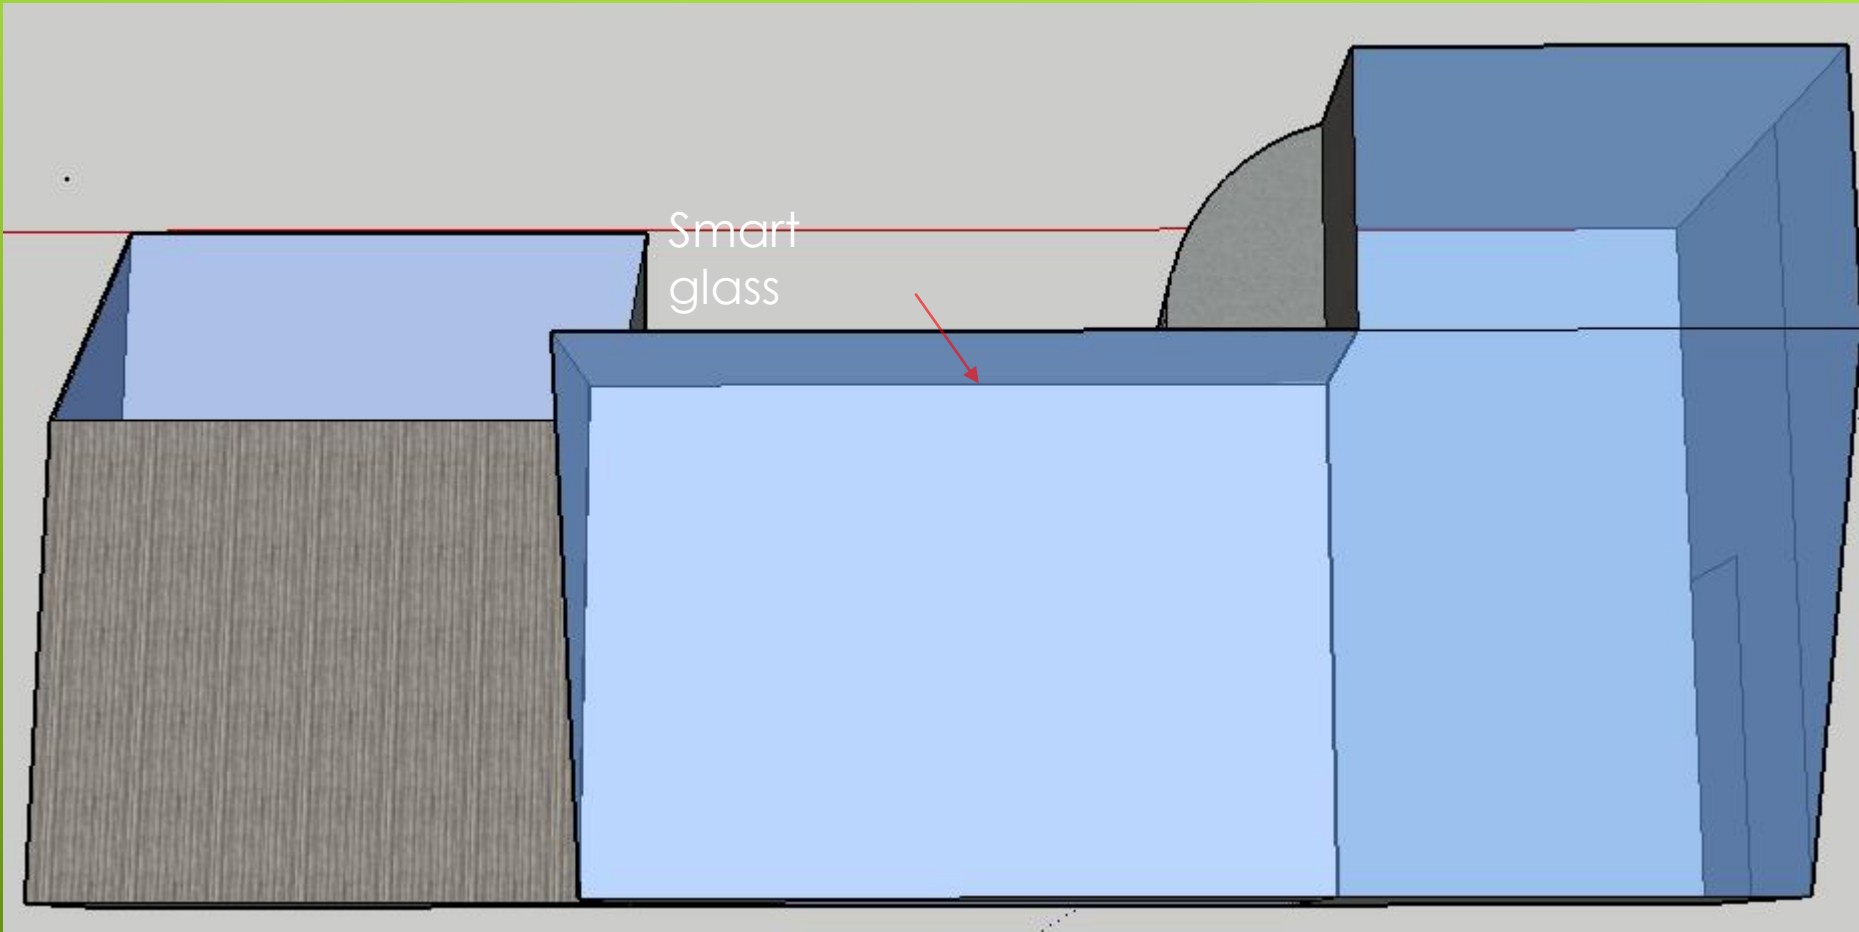

The garage will be linkable to the home owners phone meaning you can open and close it simply. To ensure a bright future electric car chargers will be inserted to make your life easy. The SMART glass will allow you show of your amazing car collection to your guests at your luxury home.

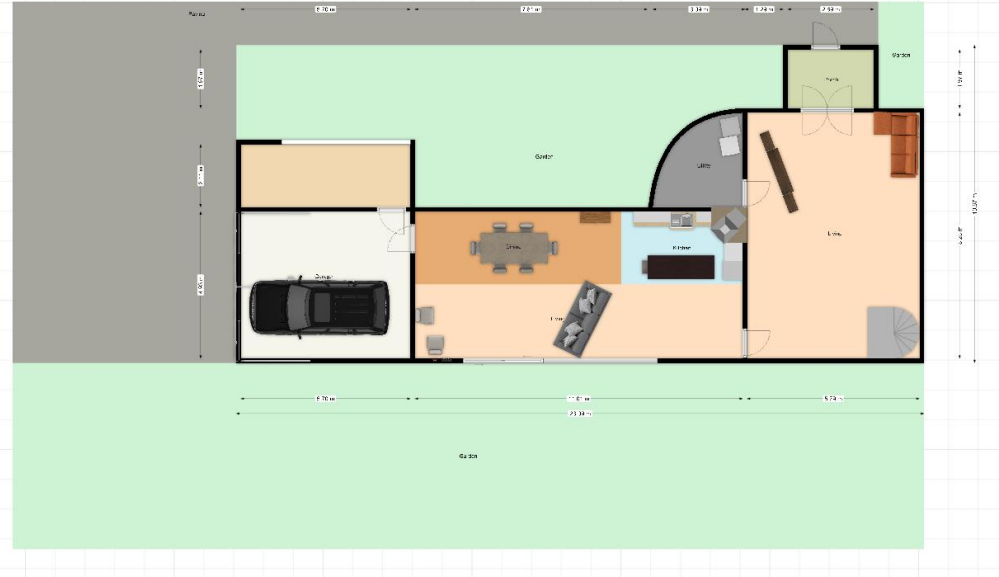

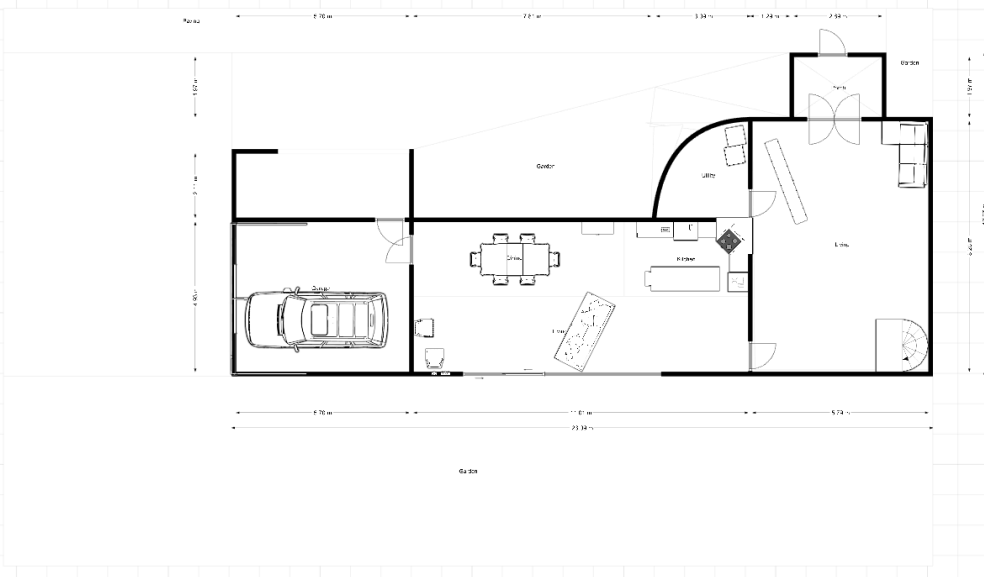

The side of the house also allows you to move from indoor to outdoor nice and easy by the glass moving right.

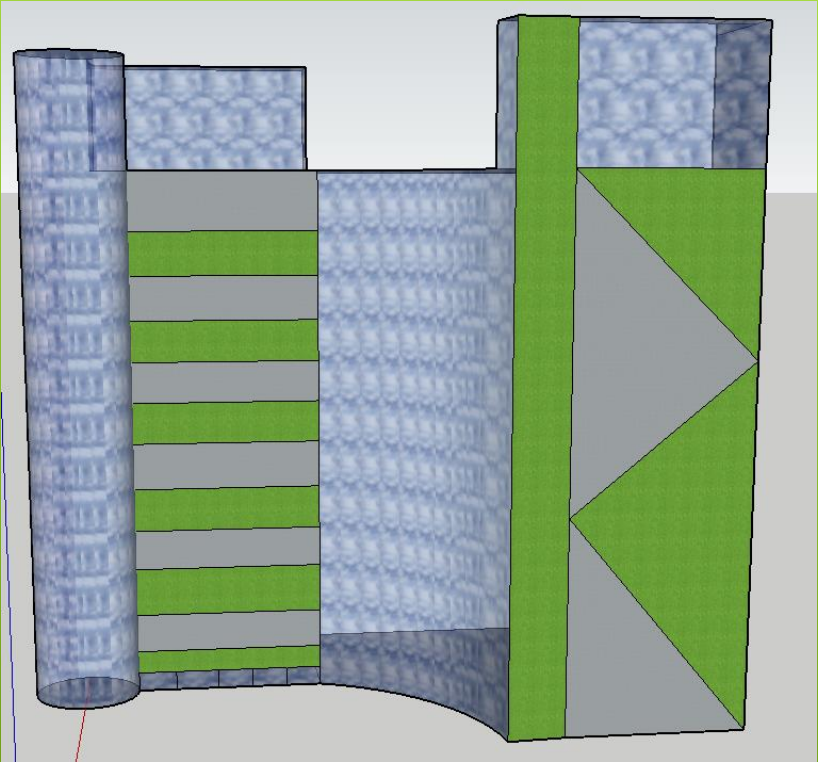

FLOOR PLANS

THE SMART HOMES

The SMART homes of the future.

Here is a apartment complex that could be used to have people could live in it features 13 stories each with at least a few apartments in, on the very top floor there is a social area and solar panels
